BIOLOGICAL ACTIVITY

Description

Cefotaxime (Cefotaxim) sodium, a β-lactamase stable cephalosporin and a third-generation cephalosporin antibiotic, possesses broad-spectrum antibiotic activity against numerous Gram-positive and Gram-negative bacteria[1][2][3][4][5].

IC_{50} & Target		
	β-lactam	β-lactam

In Vitro

Cefotaxime sodium exhibits an MIC of 0.0625 mg/L for V. vulnificus CMCP6[4].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

In Vivo

The combination of ciprofloxacin and cefotaxime is more effective in clearing V. vulnificus in vivo than previously used regimens[4].

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Animal Model:	Female, specific pathogen free, 8-week-old BALB/c mice[4].
Dosage:	30 mg/kg.
Administration:	IP every 6 h.
Result:	The viable bacterial counts in liver were lower in mice treated with cefotaxime-plus-ciprofloxacin than in those treated with cefotaxime alone (P<0.001 at 24 h and 48 h, each).
